

GILDING

GILDING

$$f(x, y, \phi) = (x + y) \left[\text{beta} \left(g(x, y, \phi), g(y, x, \phi) + 1 \right), \text{beta} \left(g(x, y, \phi) + 1, g(y, x, \phi) \right) \right]$$

$$g(x, y, \phi) = (x\phi + y(1 - \phi)) \sqrt{\frac{|\phi - 0.5|}{\phi(1 - \phi)}}$$

- When $\phi = 1$, the pyrite standard is perfect

$$\lim_{\phi \rightarrow 1} f(x, y, \phi) = x$$

- When $\phi = 0$, the pyrite standard is 'anti-perfect'

$$\lim_{\phi \rightarrow 0} f(x, y, \phi) = y$$

- When $\phi = 0.5$, the pyrite standard is 'useless'

$$\lim_{\phi \rightarrow 1/2} f(x, y, \phi) = [0, x + y]$$

RESULTS
