

Encryption

Standard way to deal with privacy is anonymization and encryption

However a lock is only as good as the key

It is sometimes possible to reverse engineer individual's from data

With quantum computing it may be possible to beat the best
encryption within seconds

Encryption

Standard way to deal with privacy is anonymization and encryption

However a lock is only as good as the key

It is sometimes possible to reverse engineer individuals from data

With quantum computing it may be possible to beat the best encryption within seconds

Uncertainty for Privacy
