

computer says No

● Uncertainty in the output gives an intelligible value for appraisal.

- Uncertainty allows the human to understand the results, with natural expressions of confidence.

- Uncertainty delivers meaningful information to inform the decision maker, supporting more subtle decisions beyond the binary class.

# Computer Says No

- Uncertainty in the output gives an intelligible avenue for appeal.
- Uncertainty allows the human to understand the results, with natural expressions of confidence.
- Uncertainty delivers meaningful information to inform the decision maker, supporting more subtle decisions beyond the binary class.

The output doesn't matter to the  
algorithm but it clearly matters  
to people
